## **DETAILED ACTION**

### ***Drawings***

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because figures 65-92 have hand written figure numbers. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Garner et al US6337472.

With respect to claim 3, Garner et al disclose a light imaging system comprising: means for collecting hyperspectral database cubes(camera, read col.5, lines 60-65); means for building spectrometric models(32, software, read col.16-17); tunable light source means(argon laser, read col.14 lines 30-50); means for illuminating one or more objects with energy-weighted spectral bands that relate to spectrometric models(22);

and means for measuring the energy(camera,25 or 30) resulting from illumination by said means for illuminating.

Garner et al's system inherently performs the claim method steps of claim 1 as it discloses all the limitations set forth in the method steps.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garner et al US6337472 in view of Messerschmidt US5828066.

With respect to claim 4, per the above discussion, Garner et al fails to disclose the tunable light source comprises a spatial light modulator.

Messerschmidt discloses a multisource infrared spectrometer system having a light source(1) comprises a spatial light modulator(9).

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify Garner et al by supplying a spatial light modulator taught by Messerschmidt in order to provide more control to the light modulation of the light source.

The proposed system of Garner et al and Messerschmidt inherently performs the claim method steps in claim 2 as it disclose all the limitations set forth in the claim 2.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1) Freeman et al US6640132 disclose a forensic hyperspectral apparatus and method including an image acquisition interface, a display monitor, and a detector.

2) Strobl et al US5303026 disclose a spectroscopic analysis system include a tunable light source.

3) Stafford US 5504575 discloses a SLM spectrometer including a spatial light modulator for modulating the light source.
